Service Detail Record Specification

This document describes the structure of the Service Detail Record (SDR) files generated by the Billingbooth platform. These contain a list of service charges issued by the distributor.

Change History

Version	Date	Comments
1.0	2019-02-12	Initial specification

Description

All SDR files are formatted in Comma-Separated Values (CSV) format using UTF-8 encoding, and contain the following columns:

Column	Data Type	Description
Customer Identifier	Text	The unique identifier used to match this charge to a customer. This can be a CLI or an account code, depending on the distributor setup
Description	Text	Description of the service charge
From Date	Date	Service charge start date
To Date	Date	Service charge end date. If the charge is a single or one-off type charge, this field will be blank
Quantity	Integer	Charge quantity
Unit Cost	Decimal	Cost per service charge in major currency (GBP, EUR, AUD, etc)
Total Cost	Decimal	Total cost for the service charge in major currency (GBP, EUR, AUD, etc)
Cost Centre	Text	Sub-categorisation of charges within a single customer
